

6.1b Equations & Calculator

Find w/calc

$$9^{\frac{1}{5}}$$

$$12^{\frac{3}{8}}$$

$$\left(\sqrt[4]{7}\right)^3$$

Calc keys

$$9 \wedge () 1 \div 5) \approx 1.551$$

$$12 \wedge () 3 \div 8) \approx 2.539$$

$$7^{\frac{3}{4}} = 7 \wedge () 3 \div 4) \approx 4.304$$

Solve

$$\textcircled{1} 4x^5 = 128$$

$$\textcircled{2} (x-3)^4 = 21$$

* Anytime you have an even $\sqrt{\quad}$, you get \pm

$$\left(\sqrt[18]{12}\right)^{23} =$$
