Symbolic Notation and Truth Tables

GOAL Use symbolic notation to represent logical statements.

Key Vocabulary
- **truth value**
- **truth table**

Conditional statements can be written using *symbolic notation*, where letters are used to represent statements. An arrow ($\rightarrow$), read "implies," connects the hypothesis and conclusion. To write the negation of a statement p you write the symbol for negation ($\sim$) before the letter. So, "not p" is written $\sim p$.

KEY CONCEPT *For Your Notebook*

Symbolic Notation

Let p be "the angle is a right angle" and let q be "the measure of the angle is 90°."

Conditional If p, then q. $p \rightarrow q$

Example: If an angle is a right angle, then its measure is 90°.

Converse If q, then p. $q \rightarrow p$

Example: If the measure of an angle is 90°, then the angle is a right angle.

Inverse If not p, then not q. $\sim p \rightarrow \sim q$

Example: If an angle is not a right angle, then its measure is not 90°.

Contrapositive If not q, then not p. $\sim q \rightarrow \sim p$

If the measure of an angle is not 90°, then the angle is not a right angle.

Biconditional p if and only if q $p \leftrightarrow q$

Example: An angle is a right angle if and only if its measure is 90°.

EXAMPLE 1 Use symbolic notation

Let p be "the car is running" and let q be "the key is in the ignition."

a. Write the conditional statement $p \rightarrow q$ in words.

b. Write the converse $q \rightarrow p$ in words.

c. Write the inverse $\sim p \rightarrow \sim q$ in words.

d. Write the contrapositive $\sim q \rightarrow \sim p$ in words.

Solution

a. Conditional: If the car is running, then the key is in the ignition.

b. Converse: If the key is in the ignition, then the car is running.

c. Inverse: If the car is not running, then the key is not in the ignition.

d. Contrapositive: If the key is not in the ignition, then the car is not running.

TRUTH TABLES The **truth value** of a statement is either true (T) or false (F). You can determine the conditions under which a conditional statement is true by using a **truth table**. The truth table at the right shows the truth values for hypothesis p and conclusion q. The conditional $p \rightarrow q$ is only false when a true hypothesis produces a false conclusion.

Conditional		
p	q	$p \rightarrow q$
T	T	T
T	F	F
F	T	T
F	F	T

EXAMPLE 2 Make a truth table

Use the truth table above to make truth tables for the converse, inverse, and contrapositive of a conditional statement $p \rightarrow q$.

Solution

READ TRUTH TABLES
A conditional statement and its contrapositive are *equivalent statements* because they have the same truth table. The same is true of the converse and the inverse.

Converse		
p	q	$q \rightarrow p$
T	T	T
T	F	T
F	T	F
F	F	T

Inverse				
p	q	$\sim p$	$\sim q$	$\sim p \rightarrow \sim q$
T	T	F	F	T
T	F	F	T	T
F	T	T	F	F
F	F	T	T	T

Contrapositive				
p	q	$\sim q$	$\sim p$	$\sim q \rightarrow \sim p$
T	T	F	F	T
T	F	T	F	F
F	T	F	T	T
F	F	T	T	T

2.7 Angles and Intersecting Lines

MATERIALS • graphing calculator or computer

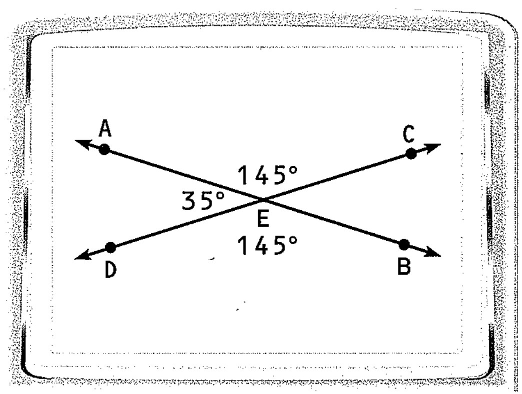
QUESTION **What is the relationship between the measures of the angles formed by intersecting lines?**

You can use geometry drawing software to investigate the measures of angles formed when lines intersect.

EXPLORE 1 **Measure linear pairs formed by intersecting lines**

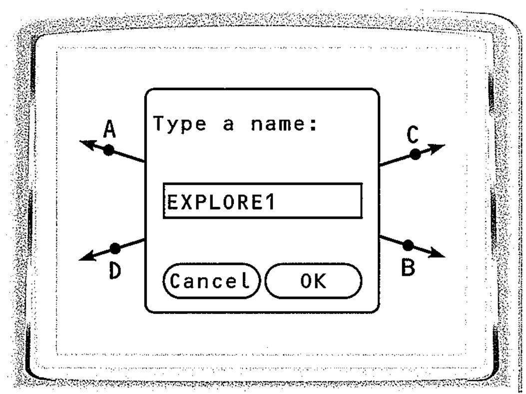
STEP 1 ***Draw two intersecting lines*** Draw and label $\overleftrightarrow{AB}$. Draw and label $\overleftrightarrow{CD}$ so that it intersects $\overleftrightarrow{AB}$. Draw and label the point of intersection E.

STEP 2



Measure angles Measure $\angle AEC$, $\angle AED$, and $\angle DEB$. Move point C to change the angles.

STEP 3



Save Save as "EXPLORE1" by choosing Save from the F1 menu and typing the name.

DRAW CONCLUSIONS **Use your observations to complete these exercises**

1. *Describe* the relationship between $\angle AEC$ and $\angle AED$.
2. *Describe* the relationship between $\angle AED$ and $\angle DEB$.
3. What do you notice about $\angle AEC$ and $\angle DEB$?
4. In Explore 1, what happens when you move C to a different position? Do the angle relationships stay the same? Make a conjecture about two angles supplementary to the same angle.
5. Do you think your conjecture will be true for supplementary angles that are not adjacent? *Explain.*

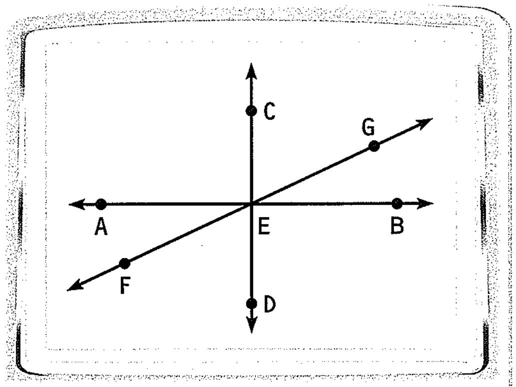
EXPLORE 2 Measure complementary angles

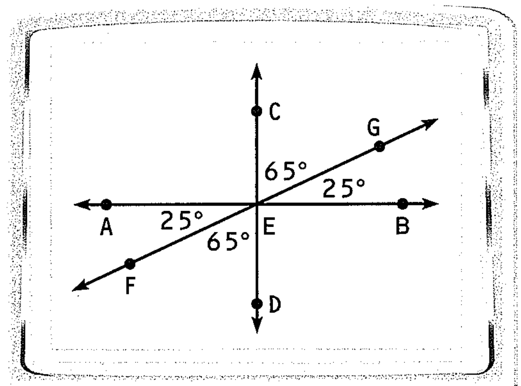
STEP 1 ***Draw two perpendicular lines*** Draw and label $\overleftrightarrow{AB}$. Draw point E on $\overleftrightarrow{AB}$. Draw and label $\overleftrightarrow{EC} \perp \overleftrightarrow{AB}$. Draw and label point D on $\overleftrightarrow{EC}$ so that E is between C and D as shown in Step 2.

STEP 2



Draw another line Draw and label $\overleftrightarrow{EG}$ so that G is in the interior of $\angle CEB$. Draw point F on $\overleftrightarrow{EG}$ as shown.

STEP 3



Measure angles Measure $\angle AEF$, $\angle FED$, $\angle CEG$, and $\angle GEB$. Save as "EXPLORE2". Move point G to change the angles.

EXPLORE 3 Measure vertical angles formed by intersecting lines

STEP 1 ***Draw two intersecting lines*** Draw and label $\overleftrightarrow{AB}$. Draw and label $\overleftrightarrow{CD}$ so that it intersects $\overleftrightarrow{AB}$. Draw and label the point of intersection E.

STEP 2 ***Measure angles*** Measure $\angle AEC$, $\angle AED$, $\angle BEC$, and $\angle DEB$. Move point C to change the angles. Save as "EXPLORE3".

DRAW CONCLUSIONS Use your observations to complete these exercises

6. In Explore 2, does the angle relationship stay the same as you move G?

7. In Explore 2, make a conjecture about the relationship between $\angle CEG$ and $\angle GEB$. Write your conjecture in if-then form.

8. In Explore 3, the intersecting lines form two pairs of vertical angles. Make a conjecture about the relationship between any two vertical angles. Write your conjecture in if-then form.

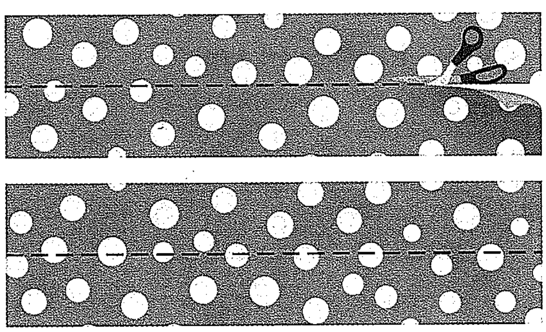
   a. Prove $m\angle ABD = m\angle CBE$.

   b. If $m\angle ABE = 99°$, what is $m\angle DBC$? *Explain.*

2. **SHORT RESPONSE** You are cutting a rectangular piece of fabric into strips that you will weave together to make a placemat. As shown, you cut the fabric in half lengthwise to create two congruent pieces. You then cut each of these pieces in half lengthwise. Do all of the strips have the same width? *Explain* your reasoning.



3. **GRIDDED ANSWER** The cross section of a concrete retaining wall is shown below. Use the given information to find the measure of $\angle 1$ in degrees.

   $m\angle 1 = m\angle 2$

   $m\angle 3 = m\angle 4$

   $m\angle 3 = 80°$

   $m\angle 1 + m\angle 2 + m\angle 3 + m\angle 4 = 360°$

4. **EXTENDED RESPONSE** *Explain* how the Congruent Supplements Theorem and the Transitive Property of Angle Congruence can both be used to show how angles that are supplementary to the same angle are congruent.

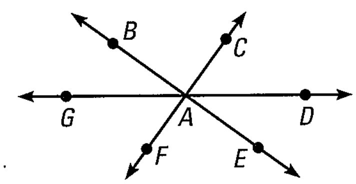
5. **EXTENDED RESPONSE** A formula you can use to calculate the total cost of an item including sales tax is $T = c(1 + s)$, where T is the total cost including sales tax, c is the cost not including sales tax, and s is the sales tax rate written as a decimal.

   a. Solve the formula for s. Give a reason for each step.

   b. Use your formula to find the sales tax rate on a purchase that was \$26.75 with tax and \$25 without tax.

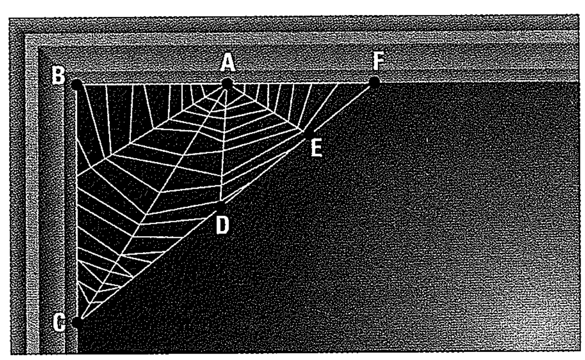
   c. Look back at the steps you used to solve the formula for s. Could you have solved for s in a different way? *Explain.*

6. **OPEN-ENDED** In the diagram below, $m\angle GAB = 36°$. What additional information do you need to find $m\angle BAC$ and $m\angle CAD$? *Explain* your reasoning.



7. **SHORT RESPONSE** Two lines intersect to form $\angle 1$, $\angle 2$, $\angle 3$, and $\angle 4$. The measure of $\angle 3$ is three times the measure of $\angle 1$ and $m\angle 1 = m\angle 2$. Find all four angle measures. *Explain* your reasoning.

8. **SHORT RESPONSE** Part of a spider web is shown below. If you know that $\angle CAD$ and $\angle DAE$ are complements and that $\overrightarrow{AB}$ and $\overrightarrow{AF}$ are opposite rays, what can you conclude about $\angle BAC$ and $\angle EAF$? *Explain* your reasoning.



2 CHAPTER SUMMARY

BIG IDEAS *For Your Notebook*

Big Idea 1

Using Inductive and Deductive Reasoning

When you make a conjecture based on a pattern, you use inductive reasoning. You use deductive reasoning to show whether the conjecture is true or false by using facts, definitions, postulates, properties, or proven theorems. If you can find one counterexample to the conjecture, then you know the conjecture is false.

Big Idea 2

Understanding Geometric Relationships in Diagrams

The following can be assumed from the diagram:

A, B, and C are coplanar.

$\angle ABH$ and $\angle HBF$ are a linear pair.

Plane T and plane S intersect in $\overleftrightarrow{BC}$.

$\overleftrightarrow{CD}$ lies in plane S.

$\angle ABC$ and $\angle HBF$ are vertical angles.

$\overleftrightarrow{AB} \perp$ plane S.

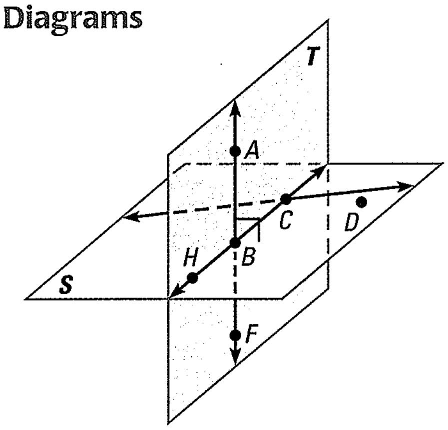


Diagram assumptions are reviewed on page 97.

Big Idea 3

Writing Proofs of Geometric Relationships

You can write a logical argument to show a geometric relationship is true. In a two-column proof, you use deductive reasoning to work from GIVEN information to reach a conjecture you want to PROVE.

REVIEW EXAMPLES AND EXERCISES

Use the review examples and exercises below to check your understanding of the concepts you have learned in each lesson of Chapter 2.

2.1 Use Inductive Reasoning

pp. 72–78

EXAMPLE

Describe the pattern in the numbers 3, 21, 147, 1029, ..., and write the next three numbers in the pattern.

Each number is seven times the previous number.

$$3 \xrightarrow{\times 7} 21, \xrightarrow{\times 7} 147, \xrightarrow{\times 7} 1029, \ldots \xrightarrow{\times 7}$$

So, the next three numbers are 7203, 50,421, and 352,947.

ry

, p. 98

2.2 Analyze Conditional Statements
pp. 79–85

EXAMPLE

Write the if-then form, the converse, the inverse, and the contrapositive of the statement "Black bears live in North America."

a. If-then form: If a bear is a black bear, then it lives in North America.

b. Converse: If a bear lives in North America, then it is a black bear.

c. Inverse: If a bear is not a black bear, then it does not live in North America.

d. Contrapositive: If a bear does not live in North America, then it is not a black bear.

7. Is this a valid definition? *Explain* why or why not.

"If the sum of the measures of two angles is 90°, then the angles are complementary."

8. Write the definition of an *equiangular polygon* as a biconditional statement.

2.3 Apply Deductive Reasoning
pp. 87–93

EXAMPLE

Use the Law of Detachment to make a valid conclusion in the true situation.

If two angles have the same measure, then they are congruent. You know that $m\angle A = m\angle B$.

▶ Because $m\angle A = m\angle B$ satisfies the hypothesis of a true conditional statement, the conclusion is also true. So, $\angle A \cong \angle B$.

EXERCISES

EXAMPLES 1, 2, and 4 on pp. 87–89 for Exs. 9–11

9. Use the Law of Detachment to make a valid conclusion.

If an angle is a right angle, then the angle measures 90°. $\angle B$ is a right angle.

10. Use the Law of Syllogism to write the statement that follows from the pair of true statements.

If $x = 3$, then $2x = 6$.

If $4x = 12$, then $x = 3$.

11. What can you say about the sum of any two odd integers? Use inductive reasoning to form a conjecture. Then use deductive reasoning to show that the conjecture is true.
